

# Todo:

## **Android Mobile App**

- ☐ Handle Apollo Client Errors.
- ☐ Write UnitTest.
- ☐ Organize Gradle files, (Multiple Gradle files, ie. version.gradle, etc.).
- ☐ Organize package structure.
- ☐ Remove Mocked Api to real one.
- ☐ Strong Validation on Login Screen, (prefer using a ViewModel).
- ☐ Refactor the source code based on S.O.L.I.D principle.
- ☐ Support Dark Theme.
- ☐ Add pagination in the JobList page.
- ☐ Distinguish Publish job in JobList page, may be different style or background color
- ☐ Add an indicator to check if it is already applied or not on both screen jobList and the details screen.
- ☐ Add Search Page.

## **BackEnd**

- ☐ Deploy to Docker
- ☐ Fix database error, while using the api
- ☐ Implement additional API, Like Search and Logout
